

# CM20219 Coursework 1

give the order of the matrix which you want to multiply and transfer to the shape.  
Eg: you have store the matrixes in stack as sequence: M1, M2, M3,M4,M5,M6....After then if you want the  $M2 \cdot M1 \cdot M4 \cdot M3$  transfer to shape, you can enter the order of the Matrix as sequence: 2,1,4,3. After that you can just click the transfer button to transfer the shape which you have selected.  
(please use “,” to separate the matrix’s order)
